Application name: CheckList

This application allows the user to edit a checklist. The user will be able to add or remove "to do" items from the checklist. The user can add items by typing it in then clicking the add ("+") button. The user can remove items from the checklist by clicking on the item itself.

Application Architecture:

- Add item button: will add a "to do" item to the checklist.
- "to do" item(s): when clicked on, that specific item will be removed from the checklist.
- Text: editable text for each item.
  - Ex: user could type "walk the dog" or "buy milk".
